

High Pressure Filters - Worldline 200

HD 152 · HD 172

- In-line mounting
- Operating pressure up to 450 bar
- Nominal flow rate up to 150 l/min

Description

Application

In the high pressure circuits of hydraulic systems.

Performance features

Protection

meet even the highest demands regarding cleanliness

classes

Protection against

malfunction: Through installation near to the control valves or other

expensive components. The specific determined flow rate guarantees a closed by-pass valve even at $v \le 200 \text{ mm}^2/\text{s}$ (cold start condition).

Filter elements

Flow direction from outside to centre. The star-shaped pleating of the filter material results in:

- large filter surfaces
- low pressure drop
- high dirt-holding capacities
- long service life

Filter maintenance

By using a clogging indicator the correct moment for maintenance is stated and guarantees the optimum utilization of the filter life.

Materials

Filter head: Spheroidal graphite cast iron (SGI)

Filter bowl: Cold extruded steel
Coating: Powder paint
Seals: NBR (Viton on request)

Filter media: EXAPOR®MAX - inorganic multi-layer microfibre web

Paper - cellulose web, impregnated with resin

Accessories

If an electrical indicator is used a transparent socket with LED for optical indication is also available with Part No. DG 041.1200.

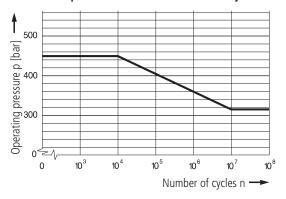

Characteristics

Operating pressure

0 ... 315 bar, min. 10⁷ pressure cycles Nominal pressure according to DIN 24550

0 ... 450 bar, min. 10⁴ pressure cycles Quasi-static operating pressure

Permissible pressures for other numbers of cycles

Nominal flow rate

Up to 150 l/min (see Selection Chart, column 2)

The nominal flow rates indicated by ARGO-HYTOS are based on the following features:

- closed by-pass valve at $v \le 200 \text{ mm}^2/\text{s}$
- element service life > 1000 operating hours at an average fluid contamination of 0,07 g per l/min flow volume
- flow velocity in the connection lines:
 up to 250 bar ≤ 8 m/s
 up to 450 bar ≤ 12 m/s

Filter fineness

5 μm(c) ... 30 μm(c) β-values according to ISO 16889

(see Selection Chart, column 4 and diagram Dx)

Dirt-holding capacity

Values in g test dust ISO MTD according to ISO 16889 (see Selection Chart, column 5)

Hydraulic fluids

Mineral oil and biodegradable fluids (HEES and HETG, see info-sheet 00.20)

Temperature range

- 30 °C ... + 100 °C (temporary - 40 °C ... + 120 °C)

Viscosity at nominal flow rate

• at operating temperature: $v < 60 \text{ mm}^2\text{/s}$ • as starting viscosity: $v_{\text{max}} = 1200 \text{ mm}^2\text{/s}$

• at initial operation: The recommended starting viscosity can be

read from the diagram D (pressure drop as a function of the kinematic viscosity) as follows: Find the 70% Δp of the cracking pressure of the by-pass valve on the vertical axis. Draw a horizontal line so that it intersects the Δp curve at a point. Read this point on the horizontal axis for the viscosity.

Mounting position

Preferably vertical, filter head on top

Connection

Threaded ports according to ISO 228 or DIN 13. Sizes see Selection Chart, column 6 (other port threads on request)

Electrical clogging indicator

Switching voltage: max. 120 V AC / 175 V DC
 Switching current: max. 0,17 A AC / 0,25 A DC
 Switching power: max. 3,5 VA AC / 5 W DC

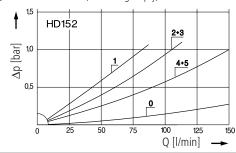

• Type of contact: Change-over

• Electrical protection: IP 65 (with mounted and secured socket)

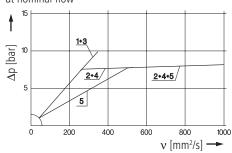

Diagrams

Δ p-curves for complete filters in Selection Chart, column 3

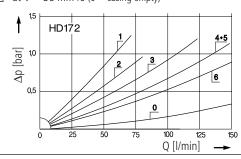

Pressure drop as a function of the **flow volume** at $v = 35 \text{ mm}^2/\text{s}$ (0 = casing empty)

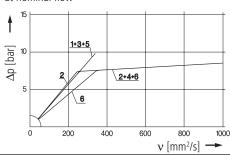

Pressure drop as a function of the **kinematic viscosity** at nominal flow

Pressure drop as a function of the **flow volume** at $v = 35 \text{ mm}^2/\text{s}$ (0 = casing empty)

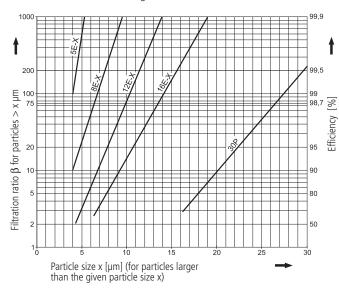

Pressure drop as a function of the **kinematic viscosity** at nominal flow

Filter fineness curves in Selection Chart, column 4

 $\bf Dx$ Filtration ratio $\bf β$ as a function of particle size x obtained by the Multi-Pass Test according to ISO 16889

The abbreviations represent the following β -values resp. finenesses:

For EXAPOR®MAX- and Paper elements:

Based on the structure of the filter media of the 30 P paper elements, deviations from the printed curves are quite probable.

For screen elements:

 $\begin{array}{ccc} \textbf{40 S} & = \text{ screen material with mesh size} & 40 \ \mu\text{m} \\ \textbf{60 S} & = \text{ screen material with mesh size} & 60 \ \mu\text{m} \\ \textbf{100 S} & = \text{ screen material with mesh size} & 100 \ \mu\text{m} \\ \textbf{Tolerances for mesh size according to DIN 4189} \\ \end{array}$

For special applications, finenesses differing from these curves are also available by using special composed filter media.

Remarks:

- The filters listed in this chart are standard filters. If modifications are required, e.g. connections SAE ¾ resp. SAE 1 (6000 psi), we kindly ask for your request.
- If an electrical indicator is used a transparent socket with LED for optical indication is also available with Part No. DG 041.1200.

The functions of the complete filters as well as the outstanding features of the filter elements assured by ARGO-HYTOS can only be guaranteed if original ARGO-HYTOS spare parts are used.

Quality Assurance

Quality management according to DIN EN ISO 9001

To ensure constant quality in production and operation, ARGO-HYTOS filter elements undergo strict controls and tests according to the following DIN and ISO standards:

DIN ISO 2941	Verification of collapse/burst resistance
DIN ISO 2943	Verification of material compatibility with fluids
DIN ISO 3724	Verification of flow fatigue characteristics

ISO 2942	Verification of fabrication integrity (Bubble Point Test)
ISO 3968	Evaluation of pressure drop versus flow characteristics
ISO 16889	Multi-Pass-Test (evaluation of filter fineness and
	dirt-holding capacity)

Before release into the series production the filter casing is tested for fatigue strength in our pressure pulse test rig. Various quality controls during the production process guarantee the leakfree function and solidity of our filters.

Our engineers will be glad to advice you in questions concerning filter application, selection as well as the cleanliness class of the filtered medium attainable under practical operating conditions.

Illustrations may sometimes differ from the original. ARGO-HYTOS is not responsible for any unintentional mistake in this specification sheet.
